

JRP 2027-2028 - Sector Response Plan Template
JRP 2027-2028 Sector Narrative

SECTOR: Shelter - Camp Coordination and Camp Management

These inputs set out the Shelter - Camp Coordination and Camp Management (SCCCM) Sector response approach for the JRP 2027-2028 planning period, including the people in need (PiN), targets, sector objectives, response strategy, cost-efficiency priorities and medium-term vision.

1. People in need and targeted

Overall people in need (PiN) of Sector assistance	2027 Rohingya refugees/FDMNs: 1,293,919 individuals (100% of the projected refugee population). Host community: 199,460 individuals, calculated as 30% of the projected host-community population of 664,865. 2028 Rohingya refugees/FDMNs: 1,355,199 individuals (100% of the projected refugee population). Host community: 204,602 individuals, calculated as 30% of the projected host-community population of 682,006.
People targeted	2027 Rohingya refugees/FDMNs: 1,293,919 individuals (100% of refugee PiN). Host community: 49,865 individuals (25% of host-community PiN; equivalent to 7.5% of the projected host-community population). 2028 Rohingya refugees/FDMNs: 1,355,199 individuals (100% of refugee PiN). Host community: 51,150 individuals (25% of host-community PiN; equivalent to 7.5% of the projected host-community population).
<i>Provide an explanation of overall PIN and target calculations: how did you reach these numbers?</i> <i>For target numbers, please clearly specify and account for coverage by partners/contributors outside the JRP, e.g., IFRC, WB, ADB, etc.</i>	For both 2027 and 2028, the refugee PiN is set at 100% of the projected refugee population and the refugee target is 100% of the refugee PiN, reflecting the population-wide nature of camp coordination, camp management, emergency preparedness and selected lifesaving SCCCMM services. For the host community, the PiN is calculated as 30% of the projected population in the identified host-community locations. The target is set at 25% of the host-community PiN, equivalent to 7.5% of the total projected host-community population. This prioritization reflects vulnerability and exposure, operational capacity, the funding environment and the need to focus assistance on communities most affected by the refugee response and disaster risks. Sex- and age-disaggregated figures are derived from the August 2026 population baseline structure and applied to the 2027 and 2028 projections.

2. Sector Objectives

The Sector objectives below guide the SCCCMM response for the JRP 2027-2028 planning period and will be aligned with the applicable JRP strategic objectives.

Objectives	Links to Strategic Objectives
1. Ensure timely and equitable delivery of shelter, NFI, camp coordination and camp management services to Rohingya refugees/FDMNs and nearby host communities, including access to safe energy solutions for Rohingya refugee/FDMN households, to reduce exposure to physical and protection-related risks.	SO2, SO3, SO4, SO5
2. Ensure critical emergency preparedness and response support to households affected by disasters and other sudden-onset events through the provision of emergency shelter, NFIs, LPG, site development, and site management support while protecting and rehabilitating ecosystems.	SO2, SO3, SO4, SO5
3. Enhance safe, inclusive and resilient living environments through community-driven shelter, settlement development, NFI, governance and resilience solutions and feedback mechanisms.	SO2, SO3, SO4, SO5

3. Sector Response Strategy (covering 2027-2028)

The 2027-2028 SCCCM response is structured around three objectives and the final Sector logframe, informed by the 2026 Inter-Sector Needs Assessment (ISNA) findings for refugees and host communities. **Objective 1** focuses on timely and equitable delivery of camp coordination and service monitoring, shelter, physical access and site safety, LPG, NFI and disaster risk management/site development support. **Objective 2** focuses on critical emergency preparedness and response through DRM site management, emergency NFI/LPG and emergency shelter assistance. **Objective 3** strengthens safe, inclusive and resilient living environments through community-driven shelter, settlement development, NFI, governance, resilience and feedback mechanisms.

The SCCCM Sector was established in 2023, under the co-leadership of IOM and UNHCR, and in consultation with the Government of Bangladesh. Consolidating the coordination of Camp Coordination Camp Management, Site Development, Shelter and Non-Food Items activities has led to more cohesive planning, increasingly integrated SCCCM assistance delivery and strengthened coordination mechanisms among SCCCM partners at the Sector and Inter-Sector levels, as well as with the Government of Bangladesh.

Under Objective 1, camp coordination and service monitoring will support regular coordination forums, follow-up of agreed actions and service gaps, updated site profiles, service monitoring and safety audits, alongside capacity strengthening for stakeholders. Shelter assistance will include new construction, repair, reinforcement, upgrading and Shelter Upgrade and Maintenance (SUM), support to extremely vulnerable households, treatment of shelter poles, alternative modified shelters such as TSS, and related technical support. The 2026 ISNA confirms substantial shelter needs among refugees: 64.1% of assessed households reported roof leakage, 45.5% damaged wall coverings, 19.2% unstable structural frames and 17.2% water entering shelters during rain or flooding; only 14.7% reported no visible shelter damage. In addition, 54.4% reported that no shelter repair, improvement or maintenance had been undertaken in the preceding 12 months. These findings reinforce the need for sustained repair, maintenance, upgrading and safer shelter solutions, prioritized according to vulnerability, structural condition and hazard exposure.

Disaster risk management is integrated across the response. Under Objective 1, priority DRM site-development actions will include rehabilitation of pathways and bridges after heavy rainfall or cyclones, relocation from high-risk areas, drainage cleaning and desilting, and stabilization of high-risk slopes, including relevant support to host communities. Chronic overcrowding and continued population growth remain central planning challenges: in the 2026 refugee ISNA,

52.4% of assessed households rated site/area overcrowding as high and a further 19.1% as very high. The Sector will therefore continue engagement with RRRC/CiCs and relevant stakeholders on safe space, decongestion, relocation from high-risk locations and integrated settlement planning, while prioritizing nature-based and technically appropriate risk-mitigation measures where feasible.

Under Objective 2, the Sector will maintain multi-hazard preparedness and response capacity through awareness sessions, risk identification, Disaster Management Committee meetings, drills and simulations, fire-response capacity, DRM training and trained first responders. Following disasters and other sudden-onset events, affected households will be supported through emergency LPG, NFI and shelter assistance, including support to extremely vulnerable households. NFI and shelter kits will be strategically prepositioned to enable rapid response. The 2026 host-community ISNA underlines the importance of this approach: 32.4% of assessed households reported taking no preparedness measures before the most recent disaster, while 55.5% reported receiving no assistance following the most recent disaster. Respondents most frequently identified earlier and more reliable warning (52.1%) and faster emergency response and relief assistance (50.0%) as priorities for improving future preparedness and response.

Under Objective 3, the Sector will strengthen accountability, community ownership and resilience. Complaints and feedback will be tracked through community feedback and response mechanisms, with emphasis on timely resolution and feedback to complainants. Community-led shelter approaches will include participatory shelter assessments, community-led repairs and household training. Participatory settlement improvement plans and community-driven hazard maps will guide site-development priorities. Community engagement will deliberately include women, youth, older persons, persons with disabilities and other groups facing barriers to participation. The 2026 refugee ISNA shows a continuing participation and accountability gap: only 23.1% of assessed households reported being actively involved and able to influence site-management decisions, while 26.5% were not involved but wanted to be. In addition, 67.9% identified complaints and feedback mechanisms and 61.3% information/help desks among the site-management services most needed. These findings support continued investment in accessible feedback, information, consultation and representative community structures.

The 2027-2028 response will also progressively strengthen community preferences and choice in NFI and energy programming through consultations, post-distribution monitoring and other participatory assessments. Where appropriate and feasible, NFI assistance will move from standardized in-kind distributions toward tailored modalities, including vouchers/cash, while monitoring household choice and outcomes. Refugees will also be supported to develop relevant technical capacities, including stove repair and safe-use skills. Energy and cooking assistance remains important: the 2026 refugee ISNA found that 55.4% of assessed households reported needing repair or replacement support for LPG cooking equipment or accessories to use LPG safely, while 38.9% reported missing lighting items such as solar lamps or torches. The Sector will therefore continue to integrate safe energy, lighting, LPG accessories, awareness and maintenance considerations within relevant assistance.

Across all three objectives, the Sector will mainstream age, gender, disability and protection considerations, with particular attention to extremely vulnerable households and people facing barriers to participation or access. The 2026 ISNA household rosters further demonstrate the importance of inclusive programming, identifying household members with functional difficulties/disabilities in both refugee and host-community populations. The response will combine lifesaving priorities with critical and resilience/sustainability activities in line with the

final logframe, while using 4W reporting, service monitoring, safety audits, post-assistance/post-distribution monitoring and other agreed information systems to identify gaps, improve targeting, strengthen accountability and reduce duplication.

The refugee response is planned against 100% of the projected refugee population as PiN and target: 1,293,919 people in 2027 and 1,355,199 people in 2028. This reflects the population-wide relevance of camp coordination and management, preparedness and selected lifesaving SCCCM services. Assistance at household or activity level will nevertheless be prioritized according to assessed need, vulnerability, hazard exposure, service gaps and available resources.

For host communities, the PiN is 30% of the projected population: 199,460 people in 2027 and 204,602 people in 2028. The target is 25% of the host-community PiN, equivalent to 7.5% of the projected host-community population: 49,865 people in 2027 and 51,150 people in 2028. Host-community assistance will be prioritized by vulnerability and exposure and will align with the logframe, including shelter, NFI, DRM/site-development and emergency-response activities where applicable. Site Development Catalogue available [here](#).

4. Estimated budget requirements

Sector Budget Requirements (USD)	2027-2028
Refugee Programme (including new arrivals)	To be updated based on the final 2027-2028 appealing-partner portfolio
Host Community Programme	To be updated based on the final 2027-2028 appealing-partner portfolio
TOTAL BUDGET REQUIREMENT <i>Please note that the total requirement will match the total project portfolio and will need to be updated based on selection of appealing partners.</i>	To be updated following finalization of the 2027-2028 project portfolio and appealing-partner selection.

For questions, please contact the SCCCM Team below and the RCP IM team:

5. Cost efficiencies & medium-term visioning (NEW)

The five questions below on our Sector's plan to improve cost efficiencies and its medium-term vision.

Guiding questions	Sector narrative
a.) How will the Sector improve efficiency in 2027-2028 compared with previous years?	The Sector will improve efficiency by concentrating resources on the prioritized lifesaving, critical and resilience/sustainability activities in the final 2027-2028 logframe; strengthening harmonized standards and monitoring; and reducing duplication through camp coordination, service monitoring and participatory settlement planning. Strategic prepositioning of emergency shelter and NFI stocks, multi-hazard preparedness, community-based first-response capacity and timely follow-up of service gaps will support faster and more predictable emergency response. Cost efficiency will also be pursued through safer and more durable shelter solutions, preventive maintenance, nature-based site-development measures where appropriate, community-led repairs and maintenance, and increased use of community capacities.
b.) How is the Sector working to – or planning to – promote self-reliance and resilience for refugees?	The Sector will promote resilience and community ownership through participatory shelter assessments, household and community-led repairs, shelter construction and maintenance training, participatory settlement improvement planning, community-driven hazard mapping and community-led site improvement initiatives. Representative committees and targeted participation of women, youth and persons with disabilities will strengthen local decision-making and oversight. Refugees will also be supported to build practical capacities relevant to the response, including shelter skills, stove repair and safe LPG use.
c.) How is the Sector working to – or planning to – promote equity in services between refugees and host communities? (e.g., area-based approaches, systems approaches)	Equity will be pursued through needs- and vulnerability-based prioritization for both refugees and nearby host communities while recognizing the different scale and nature of need. Host-community activities in the final logframe include shelter assistance and training, construction tools, emergency preparedness, rehabilitation of access infrastructure, drainage and slope-risk mitigation, NFI support and community participation. The 2026 host-community ISNA provides a clear needs basis: 55.9% of assessed households reported leaking roofs, 32.9% cracked or damaged walls and 23.5% flooding during heavy rain. Programming will therefore prioritize households and locations facing the greatest structural, disaster and socioeconomic vulnerability while strengthening complementarity with Government and development actors.

Guiding questions	Sector narrative
d.) Host community: How are the Sector's activities/projects working to – or planning to – align with broader development priorities* in the Cox's Bazar district? *Kindly mention any other district-level planning instructions, as applicable	Host-community programming will support broader Cox's Bazar resilience and disaster-risk-management priorities through shelter assistance and skills, emergency preparedness, rehabilitation of access infrastructure, drainage and slope-risk mitigation, NFI support and community participation. The 2026 host-community ISNA indicates continuing preparedness and response gaps: 32.4% of assessed households reported no preparedness measures before the most recent disaster, 55.5% reported receiving no assistance following the most recent disaster, and 52.1% identified earlier and more reliable warning as a priority. These findings support an area-based approach that strengthens household and community preparedness, safer housing, early warning, access and local resilience while complementing Government systems and longer-term development investments.
e.) What policy advocacy is needed to support the above four areas?	Key policy and operational advocacy priorities include allocation of safe space for decongestion and relocation from high-risk areas; timely Government coordination and approvals for critical shelter and site-development works; sustained financing for regular and emergency shelter repair, NFI, LPG and energy assistance; investment in safer and more durable shelter and risk-mitigation solutions; and stronger participation of refugees and host communities in planning, implementation and monitoring. The 2026 ISNA evidence reinforces these priorities: among refugees, 64.1% of assessed households reported roof leakage, 54.4% reported no shelter repair/improvement/maintenance in the preceding 12 months, and 71.4% rated site overcrowding as high or very high; among host communities, 55.9% reported leaking roofs and 55.5% reported receiving no assistance following the most recent disaster. Advocacy should also promote accessible feedback and information mechanisms, inclusive participation of women, youth, older persons and persons with disabilities, and stronger engagement with non-JRP, development and Government actors to improve complementarity and reduce duplication.
